DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on January 7, 2011 has been entered.

Claim Objections

2. Claims 1 and 4-9 are objected to because of the following informalities: The secondary carbon in structure (I) of claim 1 is missing a hydrogen. Appropriate correction is required.

Claim Rejections - 35 USC § 103

- 3. The text of those sections of Title 35, U.S. Code not included in this action can be found in a prior Office action.
- 4. Claims 1 and 4-9 are rejected under 35 U.S.C. 103(a) as being unpatentable over Demeyere et al., US 2002/0035053 A1. The reference discloses clear fabric softeners comprising a nonionic surfactant which is an alkyl or alkylphenol ethoxylated with less than 9 alkoxy moieties [0012]. Suitable nonionics include branched chain alkoxylates as described at [0029]+. These may comprise secondary alkyl groups of 6-

Application/Control Number: 10/556,646 Page 3

Art Unit: 1761

20 carbons, more preferably 10-15 carbons [0031]. Degree of alkoxylation is preferably 2-7 and more preferably 3-6. The compositions further comprise a fabric softening compound as an essential component [0053]. The fabric softener may be an ester quat as described at [0058]-[0059]. See Table II for specific softeners which meet applicant's claims. Regarding claims 4-6, R+R' is one less than the disclosed chain lengths of 6-20 carbons. Regarding method claim 7, the examiner takes the position that elevated temperature storage stability would arise from making compositions according to the teachings of the reference, in the absence of unexpected results. This reference differs from the claimed subject matter in that it does not disclose a composition which reads on applicant's claims with sufficient specificity to constitute anticipation.

It would have been obvious at the time the invention was made to make such a composition, because this reference teaches that all of the ingredients recited by applicants are suitable for inclusion in a surfactant composition. The person of ordinary skill in the surfactant art would expect the recited compositions to have properties similar to those compositions which are exemplified, absent a showing to the contrary.

In the case where the claimed ranges overlap or lie inside ranges disclosed by the prior art, a *prima facie* case of obviousness exists. *In re Wertheim*, 541 F.2d 257, 191 USPQ 90 (CCPA 1976); *In re Woodruff*, 919 F.2d 1575, 16 USPQ2d 1934 (Fed Cir. 1990).

Response to Arguments

5. Applicant's arguments filed January 7, 2011 have been fully considered but they are not persuasive. The examiner's previous arguments are most in light of applicant's

most recent amendments. The reference clearly motivates the use of ethoxylated secondary alcohols of 6-20 carbons, which meets applicant's recited R+R' chain length. A degree of ethoxylation of 2-7 is also disclosed in the same passage, [0031]. Applicant's arguments are drawn to the examples. A reference may be relied upon for all that it reasonably conveys to the person of ordinary skill in the art. The teachings of a reference are not confined to what is exemplified or disclosed as preferred.

Page 4

Regarding improved high temperature stability, the examiner recommends that a comparison with the closest prior art—the compositions of Demeyere et al—be prepared and submitted via timely filed affidavit. Attorney arguments cannot take the place of evidence.

6. Any inquiry concerning this communication or earlier communications from the examiner should be directed to the examiner, Dr. John R. Hardee, whose telephone number is (571) 272-1318. The examiner can normally be reached on Monday through Friday from 8:00 until 4:30. In the event that the examiner is not available, his supervisor, Mr. Harold Pyon, may be reached at (571) 272-1498.

The fax phone number for the organization where this application or proceeding is assigned is (571) 273-8100.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should
